Activities

Consortium study visits & staff exchanges

Regional Events with hackathons & challenges

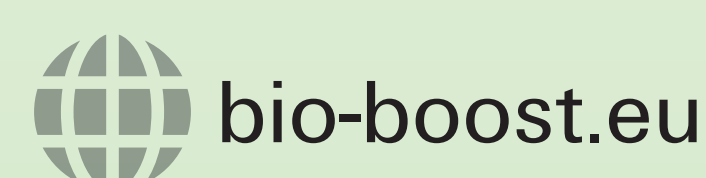

Funding webinars & Innovation projects

SME support on innovation management

To tackle global challenges like climate change and land ecosystem degradation, we must improve and innovate how we produce and consume food, products, and materials within healthy ecosystems through a sustainable bioeconomy. Project BIO-Boost will increase the potential of the participating innovation agencies to learn from leading innovator regions, and cement this knowledge and experience in the organizations, building and expanding networks, expanding the cooperation, and enlarging the participation of more diverse innovation stakeholders and territories to existing successful initiatives in the bioeconomy.

The BIO-Boost project has received funding from the European Union's Horizon Europe coordination and support action under grant agreement No 101096150. The BIO-Boost project and its content reflect only the author's view, therefore the NEIA is not responsible for any use that may be made of the information it contains.
